NORTH IDAHO ENERGY LOGS® INCORPORATED

Energy Logs

1. Each 4"x13" log weighs 7-8lb and contains approximately 68,000 btu's. Recommended to only burn 2 logs at a time.
2. No added glues or binders, intense pressure melts the natural lignin and creates the bond when cooled
3. Only clean sawdust and shavings from sawmills, never any used, dirty or painted wood goes into our logs
4. Proprietary blend of North American softwoods, heavy to the Douglas Fir and Larch/Tamarack
5. Burns longer and hotter than like species of cordwood due to the density, low 6-7% moisture and tight compaction
6. Burns cleaner with less ash and less creosote than cordwood
7. 2 logs typically can get from 7 to 9+ hrs through the night with the stove damper turned down
8. Try a few logs to test and see the difference.
9. Starting any fire you must start small and build up to a good bed of coals especially with these logs. See the back of the log fact sheet for helpful starting suggestions
10. Must be stored undercover and away from both direct and ambient moisture. Inside storage is highly recommended, such as garage etc
11. The commercial pallet of logs contain 240 logs, pallet size is 36"x39" and will weigh approx. 1800 to 1950lbs
12. Reminder that these can shift during transit and MUST secure your load

Individual results may vary depending on stove, settings and desired temp

NORTH IDAHO ENERGY LOGS® INCORPORATED

Super Premium Pellets

1. Averages 75% less ash than allowable PFI standards = Burns Cleaner & less time cleaning stove
2. Averages 47% less moisture than allowed = higher BTU, around 8400 btu's per lb, and less moisture means more pellets in the bag
3. Proprietary blend of North American softwoods, heavy to the Douglas Fir and Larch/Tamarack
4. No additives, no binders or glues. Only clean sawdust and shavings from sawmills
5. We never use dirty, used, painted wood in our pelletizing process
6. Clear bags let you see the quality
7. Buy a couple bags, clean the stove thoroughly, and see not only how clean they burn, but also the heat output
8. North Idaho Super Premium pellets have 50- 40lb bags per ton & have 2 outer covers for protection
9. Always inspect the full pallet covers after unloading from truck to make sure covers are not compromised
10. PLEASE NOTE All individual pellet bags do have breather holes, must be kept under cover & away from direct moisture once you have opened the outside covers
11. Remind customers that product can shift during transit, and to ALWAYS secure their load.
12. To stack pallets, must have an upside down pallet or plywood between them
13. Refer to brochure & info@northidahoenergylogs.com for more info.
